

FUDDRUCKER'S® Cheektowaga, New York

Fuddrucker's® roof deck system project presented a unique set of requirements:

- Noise reduction
- Provision of an open, rustic environment
- Utilization of parallel chord wood trusses as roof system support
- Fast construction cycle

Martin Fireproofing and the Perform-A-Deck® DTA system fit the bill:

- Versa-Dek® S, supplied by the Metal Dek Group,™ was selected as the structural support element and provided the finished interior surface of the Perform-A-Deck® system
- The acoustical performance of Versa-Dek®S allowed for the openness of the dining area by eliminating the need for an acoustical ceiling.
- NRC of .90 min. could thus be achieved with Perform-A-Deck® DTA.
- Perform-A-Deck® DTA and the wood trusses were coated with a "Fuddrucker's Red" finish to add a dramatic back drop to the open space.

J.P. Armitage with Rock Solid Construction stated "one of the things I liked about selecting Martin Fireproofing was their streamlined approval process...submittal of a comprehensive set of drawings of the Perform-A-Deck® system. Martin Fireproofing worked closely with the architect to assure the correct product for this project. Normally, several vendors would provide this. The Perform-A-Deck® DTA system included the roofing substrate, foam insulation, waterproof membrane and fasteners."

"By coordinating their work closely with us, they helped complete the project three weeks ahead of schedule. It was a pleasure working with Martin Fireproofing and we hope we will with them again soon."

Tom Martin noted, "the Design-Build Team worked well from the beginning. We came up with a smart, functional roof deck system. The team-work allowed for the restaurant to open for business sooner...making for a happy owner!"
